Coming up on Friday 17 October 2008

The microgeneration of power for small businesses

From Paul Knapman

[paul@rugby.prontaprint.com](mailto:paul@rugby.prontaprint.com)

01788 565650

## Our last meeting in September - 'VAT pitfalls'

---

Ian gave a lively and interactive account of a subject that might have had us yawning over the left over cold baked beans. He has been running a firm of bookkeepers since 2004, providing tailor-made bookkeeping services for small businesses across the West Midlands, under the trading name of Approachable Accounting. He is an approved supplier of consultancy services on the West Midlands Supplier Register of Business Link and Chamber of Commerce. Fair to say I think, everyone came away knowing something they hadn't previously been aware of.

## Our next meeting on Friday 17 October- speaker Cindy Musgrave

---

### Microgeneration of Power

Cindy is marketing manager with Encraft, a consultancy specialising in renewable technologies. She enjoys being on the front line giving advice on steps everyone can take to live more sustainably. Cindy has been involved in the world of sustainability for eight years, specifically with helping people use energy wisely. Her background working in the financial sector reflects a common theme of helping people save their money.

Microgeneration – options for small businesses

Cindy is going to give a whistle-stop tour of microgeneration technologies and how and where, for example, small scale wind turbines or solar panels can be installed on small business premises. Her talk will also give everyone practical tips on how they can save energy in their homes and businesses without being miserable and cold – and information on help available.

## Friday 18 October- Microgeneration of Power
